Joseph Camacho-Terrazas 10/26/2020 File conversion -- remove control blocking data from backups

Problem Description

For this problem, given a text file, I was to remove the control characters using Java, Python, and Perl. This was a bit tricky, because I had to ensure that when I read in the files in each language, it would preserve all the control characters. To verify this, after I read the file into a string in each program, I wrote it directly back to a new file and checked it in Vim on the lab computers (I deleted the code that did this for my final submission). All my programs preserved the control characters correctly, so I proceeded to eliminate them. To do this, I mostly used regular expressions to filter out the control characters. In Java, I used replaceAll to replace the control characters with an empty string using a regular expression. I then wrote the result to a new file and verified it in Vim. Perl has a regular expression to get rid of all non-printable characters, so I implemented that and once again wrote the results to a new file and verified in Vim. As for Python, the approach was a little different. I used a lambda function that would create a new string out of characters only in the code point range between 32 and 126. This eliminates all control characters and other non-printable characters. I then printed the output to another file and verified with Vim once again.

Java Code and Output

```
*Joseph Camacho-Terrazas
*10/26/2020
*Input: The backup text file
*Output: Resulting string after eliminating control characters
*Preconditions: The file must exist and filename must be valid
*Postconditions: Print the resulting string after eliminating all control charact
import java.util.*;
import java.nio.file.*;
import java.io.*;
public class ControlChar {
    public static void main(String[] args) {
        try {
            //Create a path to the text file and read it into a string
            Path file = Paths.get("control-char.txt");
            String originalString = Files.readString(file);
            //Create a new string, perform control character removal using regex
and print the results
            String modifiedString = originalString.replaceAll("\\p{C}", "");
            //Create a new file to store the output and check if it already exist
            File output = new File("javaoutput.txt");
            if(output.createNewFile()) {
                System.out.println("File created successfully " + output.getName(
));
            else {
                System.out.println("File exists");
            }
            //Create a filewriter and write the new string to the file and close
            FileWriter newWriter = new FileWriter("javaoutput.txt");
            newWriter.write(modifiedString);
```

File conversion -- remove control blocking data from backups

```
newWriter.close();
}

catch (IOException e) {
    //Catch any IO Exceptions
    System.out.println("There was an error" + e);
}
}
```
